Vp855 is involved in the secretion of the Golgi form of the soluble vacuolar carboxypeptidase Y, but not the trafficking of the membrane-bound vacuolar alkaline phosphatase. Both Vp855 and obseity receptor gene-related protein are important for functioning membrane trafficking
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Submitted (25-JUL-2001) National Institutes of Health, Mammalian Gene Collection (MGC), Cancer Genomics Office, National Cancer Institute, 31 Center Drive, Room 11A03, Bethesda, MD 20892-2590,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         NIH-MGC Project URL: http://mgc.nci.nih.gov

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Ist strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AL552981 10nc sapiens PLACENTA COT 25-NORMALIZED Homo sapiens CDNA clone CSODI072YL04 5-PRIME, mRNA sequence.

1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoR V sites of the pCMVSPORT & vector. Library
was normalized. Library was constructed by Life Technologies, a
division of Invitrogen. This sequence belongs to sequence cluster

WPI; 2004-595751/58.

New oligonucleotides that inhibit expression of the leptin receptor related protein, useful for treatment and prevention of e.g. osteoporosis, obesity, diabetes, anorexia, hematopoiesis, and angiogenesis

Claim 12; SEQ ID NO 21; 104pp; French.

The present invention relates to a leptin receptor related protein (OB-

CC RGRP) antisense oligonucleotide (ON; ADR27653), that hybridises specifically with and inhibits the expression of ADR27652. The ON promotes expression of leptin receptors on the cell surface and may contain phosphorothioate bonds; 2'-O-methyl nucleotides and/or a contain phosphorothioate bonds; 2'-O-methyl nucleotides and/or a criethyleneglycol residue at the 3'-end. Also claimed are interfering RNA triethyleneglycol residue at the 3'-end. Also claimed are interfering RNA (iRNA) of 15-2s nt that hybridize specifically with ABR27672, and inhibit cc expression of OB-RGRP. Also claimed are fusion proteins (FPS) and their coding sequences comprising OB-RGRP or MY047 (thought to be a member of coding sequences comprising OB-RGRP or MY047 (thought to be a member of the OB-RGRP family, shares 68* homology with OB-RGRP), and a protein that cod a detecting compounds that modify the interaction between correct leptin receptor and OB-RGRP proteins, which can be used to prevent or treat leptin-related disorders. On also related interfering RNA, are used for prevention and/or treatment of leptin-related disorders, e.g. osteoporosis (or other conditions involving reduced bone density, and calcification; obesity; diabetes; anorexia; disorders of sexual maturity, and inflammation, fetal development and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                099
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    099

ö
active against loss or gain of weight or diabetes in humans or animals. The method comprises measuring the effect of a test compound on the expression of at least one of the genes LEPROTIA (leptin receptor overlapping transcript-like 1) or OB-RGRP (leptin receptor gene related protein). Alternatively the method comprises measuring the effect of the compound on intracellular transport as far as the cell membrane (CM), the presence at CM, and internalisation from the membrane of proteins (X) encoded by the specified genes, or parts of them. Compounds of the invention are used to treat or prevent obesity, weight loss and diabetes. The current sequence represents the human OB-RGRP gene sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              540

Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; and immunomodulatory; muscular active general; vulnerary; gastrointestinal activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The lung cancer associated polynucleotide sequences are lung cancer associated polynucleotide sequences may be used for detection of lung cancer; chromosome identification, as chromosome markers, and for numerous other diagnostic or research purposes. The proteins may be used to treat disorders such as neural, immune, muscular, reproductive, gastrointestinal, pulmonary,

The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length cDNA are useful length clones were obtained by construction of full length enriched cDNA length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers inhabet the production of the full length cDNA easily without any special methods. The present sequence is a full length human cDNA of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly
                                                                                                                                                                                   1080
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  their use

This invention relates to a novel primers useful for synthesising full length cDNA molecules that encode human proteins. Specifically, it refers to secretory or membrane proteins that are potential therapeutic agents/ target molecules in the field of medicine, and in particular genes encoding proteins that are associated with signal transduction, glycoproteins and transcription. The present invention describes a method for efficiently cloning a full length human cDNA from both the 5' and 3' ends using the oligo-capping method. This polynucleotide sequence is a full length human cDNA clone of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     152
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              212
